Learn good practice for Oiled Wildlife Response in Australia

Learn about the impact of oil on wildlife

Participate in classroom activities and case studies with experienced facilitators

Use of Oiled Wildlife Response processes and resources to reinforce learning objectives

This course is designed for industry and agency personnel and wildlife specialists involved in preparing for and responding to wildlife activities during an oil spill response in Australia.

It provides a broad understanding of the concepts further developed in the Oiled Wildlife Response Management course.

The training will be classroom-based with trainer-led sessions, interactive group components and case studies.

Training sessions include:

- Overview of Oiled Wildlife Response in Australia
- Oil types and effects of oil on wildlife
- Oiled Wildlife responder Health and Safety
- Introduction to Oil Spill Wildlife Response Preparedness

This course can be delivered face-to-face or remotely. It can also be tailored for company specific delivery.

Book online at: www.amosc.com.au
